YouTube Examples

Link Prediction Pipeline

(This video is a comparison of how link prediction used to have to be performed before the python client, but it is still a great demonstration of how to implement such a pipeline)

Graph Data Science Documentation

This will contain all of the operations, concepts, and syntax for using GDS. While in the docs everything is shown as Cypher calls, the Python package replicates the syntax almost exactly. So in most cases you can copy + paste the function call into the Python Client. So don't be deterred by the lack of Python.

Graph Algorithms Book

Note: The code in this book is pretty out of date but it is great for its descriptions of basic GDS concepts and descriptions of the essential algorithms
